

This week we had our first meeting as a group outside of the class. We worked together to set a general roadmap of this semester and discussed goals to have finished. We decided that for the first 2 weeks we will work in a sprint-like environment, splitting up into 3 different groups to work on smaller workloads. Jack and Ian will be working on detecting grass with our project, Ben and John will be creating a simple UI to make the application easier to use, and Lauren and Madi will work on creating a way to efficiently compare the accuracy of the new images that are outputted by the program.
