

This week was spent researching and learning more about PyTorch. We had decided to move away from using TensorFlow because of the ease of use and extensive documentation on PyTorch. The fact that PyTorch is also open source as opposed to TensorFlow is also something that really appealed to us. We also had an online discussion about Areas of Professional Responsibility reflection. This was a good assignment to begin a deeper conversation about ethics and what we think our project should focus on. We found that for the majority of points we were in agreement with how we should prioritize them.
